Integrated Pest Management

PCIS offers effective pest management solutions through a team of experts. Our Integrated Pest Management (IPM) approach is based on four principles that together we call ORDM – Education & Omission, Restriction, Destruction & Monitoring. An IPM program is successful only because of the strong partnership between pest control service provider and its' customer. Partnership is a key prerequisite for IPM.

Basic preventive measure which means preventing the pests from entering the premise or property. In short denying entry to the pests.

Frequent monitoring of the pest population to ensure that the pest population is under control.

Restrict the breeding or harbourage for the pests by maintaining proper sanitation program and by following proper storage practices. This also involves sealing of cracks and crevices which becomes ideal harbourage for insect pests.

Non-chemical and Chemical measures to manage the pest population irrespective of the level of infestation.

IPM PROGRAMME: PARTNERSHIP RESPONSIBILITIES

Preventive Pest Management (By Customer)

- Omission & Restriction
- Sanitation
- Access denial
- Habitat Modification/
Controlled atmosphere
(Lighting, GMP)

Curative Pest Management (By PCIS)

- Inspection
- Identification
- Trapping and Monitoring
- Recommendation
- Pesticides
- Documentation

Standard IPM Package

Industries We Serve

Food Processing Industry

Pests are a key source of contamination in food or beverage products. Understanding the critical areas and risk of infestation is important when coming up with an Integrated Pest Management (IPM) program. We have services and products that have been designed to ensure protection of every food processing unit's requirements.

Food Retail Industry

Food Retail restaurants rely on customer satisfaction. Large chains that are run on ownership and franchisee models have strong standards to comply with, if they are to stay in business. It is vital to standardize pest management practices for a brand to survive.

Pharmaceutical Industry

The pharmaceutical industry mandates some of the strictest compliances. Contamination is an irreversible risk and can bring the shutters down on the biggest organizations, leaving a permanent scar on the reputation of brands. A reliable pest management program should be able to address each environment without impacting your production line independently.

Manufacturing & Warehousing Industry

The manufacturing and warehousing industry protects goods in transit. Any sort of pest outbreak could have cross contamination and serious business losses. In a competitive business, even bird droppings on packaging can result in loss of clientele. The best solution is one that takes a 360-degree view to manage your problems before they start.

Offices, Banks & Commercial Establishments

Protecting your team from health pests is easy when you are associated with us. We have additional products and services that ensure the air is free from bacterial and fungal virus. We even offer special discounts, only for our client's employees!

Hospitality Industry

Hospitality industry risks hosting hitchhiking pests who tag along on the luggage of the guests. Bedbugs, cockroaches and many other pests have migrated across continents and are not new to finding perfect harbourage in a hotel.

Knowing their hideouts is one part of the solution; treating it with minimal downtime, is where our expertise is delivered. Our customised service package can be combined with heat treatment for quick options.
